

JULY Hepatitis Awareness

*But I will restore you to health and heal your wounds,
declares the Lord.*

– Jeremiah 30:17

July 28 is World Hepatitis Day.

The World Health Organization data show an estimated 325 million people worldwide are living with chronic hepatitis B or chronic hepatitis C. Viral hepatitis caused more than one million deaths each year, a number comparable to deaths caused by tuberculosis and HIV combined. While deaths from tuberculosis and HIV have been declining, deaths from hepatitis are increasing. Testing and preventive measures are crucial, as are education and awareness in communities like ours.

At MLH: The **Center for Advanced Liver Disease** at the **James D. Eason Transplant Institute** at **Methodist University Hospital** exclusively manages all forms of liver disease. Our physicians are board certified in Transplant Hepatology and Gastroenterology, and specialize in treatment of cirrhosis and end stage liver disease, hepatitis, and cancers of the liver.
